

The Oral Cancer Screening System

To our patients:

Bay Breeze Dentistry is proud to be able to offer you a more reliable, sophisticated way to perform an oral cancer screening, **Velscope Oral Cancer Screening**. This instrument, which acts like a flashlight, uses a special light and illuminates abnormalities that the unaided eye cannot detect. It takes just a few minutes and nothing enters your mouth. It is just like a flashlight but we can detect lesions that could be abnormal and/or pre-cancerous.

THIS IS AN ANNUAL REQUIREMENT. Our fee for this service is **\$42.00** and may not be covered by insurance.

An oral cancer screening is important for any patient, however it is especially important if you have a history of smoking, use chewing tobacco, had exposure to human papilloma virus, (HPV), or are diabetic.

Thank you!

*Bay Breeze
Dentistry*
